NAME

cefconv – convert a TeX document containing CEF macros into 'preprocessed' form.

SYNOPSIS

cefconv < *infile* > *outfile*

DESCRIPTION

The **Chinese Encoding Framework** (**CEF**) developed by Christian Wittern <cwittern@online.central.de> makes it possible to include CJK characters in various encodings using the SGML macros **&CX-aabb;** for Big 5 and CNS encoding and **&U-aabb;** for Unicode (**X** denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. **aabb** is either a decimal or hexadecimal number)

cefconv converts the CEF macros into a form which can directly processed with LaTeX 2$_\varepsilon$.

This filter is part of the **CJK** macro package for LaTeX 2$_\varepsilon$.
